Dear Reader,

Having pursued a bachelor's in mathematics, it's safe to say I love problem-solving, so it's no surprise that when math didn't feel fulfilling, I gravitated towards computer science and never looked back. That being said, all the math classes I took were very helpful in teaching me problem-solving techniques as well as allowing me to think in a more methodical way and creating a plan rather than diving straight in and getting stuck.

As a software engineer, I'm able to assist in the backend and frontend of an application. I have experience with JavaScript, React, Redux, Python, CSS, and more, with that list only growing. I'm confident that I can contribute greatly to any company and their mission. My project, [Little Dipper](#), showcases the aforementioned technologies while prioritizing the user experience to allow for intuitive access to all the functions of the app.

In addition to being fluent in multiple programming languages, I am also fluent in Spanish and have leadership experience. While studying at Brigham Young University, I volunteered as a Program Director at Foster Love, a program in which I would assist in planning biweekly activities for local foster youth, as well as supervising said activities and other student volunteers. I am excited to bring that dedication to the workplace and expand my skills. I hope to hear from you soon.

Sincerely,

Kevin Pravia Mayorga
